

Cushion Tire Forklift Attachment

Cushion Tire Forklift Attachment - Cushion tires have a smooth profile on a solid tire with its tread being bonded to a steel ring so as to shape the tire. The tire is pressed on the hub which is then attached onto the truck. These kinds of tires are ideal to utilize in smooth floor warehouses and are obtainable in different rubber or polyurethane compounds.

A poly tire comprises polyurethane rather than rubber and is also a solid tire. They are utilized rather than cushion tires for such applications which require a higher tire load capacity or a lower steering effort than could be acquired utilizing the cushion tire. Poly tires accessible in a range of hardness ratings so as to meet other specific application needs. Narrow Aisle models and Orderpicker lift trucks will normally make use of small diameter poly tires for their outrigger load wheels.
