

Fork Positioner for Forklifts

Fork Positioner for Forklifts - A fork positioner is a tool made out of top quality materials meant to withstand the most difficult procedures and work environments. This piece of equipment could enable the person driving to work the blades hydraulically without leaving the seat. Side shifting models have the added ability to be able to laterally position the arms or the entire load so as to facilitate much more accurate carrying and position in a quicker and much more efficient way.

The only one of its kind fork pocket design could enable the one operating it to securely sway the unit's blades without any worry of destroying the positioning cylinders. This can allow the worker the alternative to either execute independent or simultaneous fork movement, dependent upon the job requirement. For most forklifts with non-OEM carriages, complete carriages are considered necessary. Standard OEM carriages can be converted into fork positioners on available units.
